

## STAND FOR UNDER HOOK WEIGHING

Stand for weighing loads in under hook weighing method. Loads are placed on special pan hanged on a hook mounted to the bottom of the scale.

Application of a stand is recommended when measuring mass of magnetic materials, materials with non-standard dimensions or shapes. Measurement with application of the stand is in most cases more precise, as it eliminates the possibility of not ideal placing of the load on a weighing pan and in result it decreases the possible measuring error. Additionally, stand is applicable for determination of density of solids and liquids.
